EDUCATION

Edwardes College

Bachelor of Science in Computer Science

Peshawar, Pakistan

2021 – 2025

EXPERIENCE

Strings Technologies

Full Stack Developer

Peshawar, Pakistan

2026 – Present

- Built and shipped a three-tier student information portal end to end: React + Vite frontend, Flask REST API gateway, and Odoo ERP backend integration.
- Implemented JWT authentication, Marshmallow request validation, and Redis-backed rate limiting on the Flask gateway, backed by PostgreSQL.
- Developed the scholarship module end to end — multi-phase applications, evaluation sheets, and configurable scoring — plus a CMS module for portal content.
- Deployed to staging and production with Gunicorn under systemd behind an nginx reverse proxy.

PROJECTS

Hotel Management System | Next.js, Tailwind CSS, Supabase, Stripe

- Developed a full-stack hotel management platform featuring a customer-facing landing page and an integrated admin and employee dashboard for efficient operations.
- Implemented seamless online payment processing and invoicing through Stripe integration, ensuring a reliable and user-friendly checkout experience.
- Designed a responsive, modern UI using Tailwind CSS and Next.js for fast performance and optimal user experience across devices.
- Enabled real-time updates for room availability, staff management, and booking analytics through Supabase's real-time capabilities.

Pulse | Next.js, Supabase, PostgreSQL, Recharts

- Built a self-hosted, privacy-friendly web analytics platform: a ~1 KB embeddable tracker script, an ingestion API with bot filtering and Zod validation, and live dashboards for visitors, pages, referrers, countries, and devices.
- Designed cookieless unique-visitor counting with a daily-rotating salted hash — no cookies and no stored IP addresses — keeping the tracker consent-banner free.
- Modeled analytics aggregates as PostgreSQL functions (time series, breakdowns, live visitors) secured behind row-level security, with public read-only share dashboards.

Scan2Help | Next.js, Prisma, PostgreSQL

- Built an emergency-contact QR sticker platform: customers order stickers, activate them with emergency details, and any scan opens an instant “Call Now” page.
- Implemented passwordless magic-link authentication (JWT), QR code and printable PDF generation, and an admin order-approval workflow with transactional emails.
- Integrated WhatsApp-based order and payment confirmation tailored to the local market.

Lecture2Note | React, Tailwind CSS, Python, FastAPI

- Built an AI-powered study platform that converts lecture audio and video into structured notes, concise summaries, and interactive quizzes.
- Engineered the multi-stage processing pipeline (transcription → notes → summary → quiz) with upload handling and processing states, plus a clean review UI for studying notes and taking the generated quizzes.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks/Libraries: Next.js, React.js, Flask, FastAPI, Node.js, Vite, Tailwind CSS, ShadCN UI, Prisma

Databases: PostgreSQL, Supabase, MongoDB, Redis

Backend & Deployment: REST APIs, Authentication (JWT, magic links), Vercel, Linux (nginx, systemd, Gunicorn)

Developer Tools: Git, GitHub, VS Code, Figma, Postman, Odoo
