EDUCATION

Edwardes College

Bachelor of Science in Computer Science

Peshawar, Pakistan

2021 – 2025

EXPERIENCE

Strings Technologies

Odoo Technical & Full Stack Developer

Peshawar, Pakistan

2026 – Present

Campus management system for IMSciences: Odoo 19 ERP and a self-service student portal

- Built the student portal: a React app on a Flask API gateway that reads live records from Odoo over JSON-RPC. Students check transcripts, CGPA, attendance and timetables, register for courses, and apply online for scholarships, hostel, transport and semester freeze.
- Hardened the gateway for real traffic with JWT authentication, request validation, Redis rate limiting and a caching layer that cuts repeat calls to Odoo; deployed with Gunicorn, systemd and nginx.
- Built the scholarship system: a ~200-field need-based application with configurable scoring, and donor-funded seats (HEC, CMEEF, FATA) that waive specific fees and settle any shortfall or surplus on the student's fee account automatically.
- Built HR and payroll: promotions, transfers and disciplinary records, FBR income-tax withholding, allowances, hourly pay for visiting faculty, and payroll entries posted to the general ledger.
- Built the staff appraisal system: weighted scorecards for teaching, research and administration, approval from self-review through HOD and committee to dean, and access rules so each reviewer sees only their own department.
- Built 8 PDF and Excel reports for donor claims, fund-utilization audits and annual staff evaluations.

PROJECTS

Pulse | Next.js, Supabase, PostgreSQL, Recharts

- Built a self-hosted, privacy-first web analytics platform: a ~1 KB embeddable tracker, an ingestion API with bot filtering and Zod validation, and live dashboards for visitors, pages, referrers, countries and devices.
- Designed cookieless visitor counting with a daily-rotating salted hash (no cookies, no stored IPs, no consent banner), with aggregation in PostgreSQL functions behind row-level security.

Scan2Help | Next.js, TypeScript, Prisma, PostgreSQL

- Built an emergency-contact QR sticker platform: anyone who scans a sticker gets a bilingual (English/Urdu) page with the owner's emergency contacts and a one-tap Call Now button, with no app or signup.
- Secured it with single-use, SHA-256-hashed magic-link login and scrape-proof phone numbers revealed only on tap, with per-IP rate limiting; approving a JazzCash/EasyPaisa order atomically mints the buyer's QR codes.

Lecture2Note | React, Tailwind CSS, Python, FastAPI

- Built an AI study platform with a multi-stage pipeline (transcription → notes → summary → quiz) that turns lecture recordings into structured notes and interactive quizzes.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks/Libraries: Odoo 19 (ORM, QWeb), Next.js, React, Flask, FastAPI, Node.js, Vite, Tailwind CSS, shadcn/ui, Prisma

Databases: PostgreSQL (functions, row-level security), Supabase, MongoDB, Redis

Backend & Deployment: REST APIs, JSON-RPC, authentication (JWT, magic links), rate limiting, Vercel, Linux (nginx, systemd, Gunicorn)

Developer Tools: Git, GitHub, VS Code, Figma, Postman
