EDUCATION

Edwardes College

Bachelor of Science in Computer Science

Peshawar, Pakistan

2021 – 2025

EXPERIENCE

Strings Technologies

Full Stack Developer

Peshawar, Pakistan

2026 – Present

- Built and shipped a three-tier student information portal end to end: a React + Vite frontend, a Flask REST API gateway, and an Odoo ERP backend.
- Secured the Flask gateway with JWT authentication, Marshmallow request validation, and Redis-backed rate limiting, on PostgreSQL.
- Developed the scholarship module end to end (multi-phase applications, evaluation sheets, configurable scoring), plus a CMS module for portal content.
- Deployed to staging and production on Linux: Gunicorn services under systemd behind an nginx reverse proxy.

PROJECTS

Pulse | Next.js, Supabase, PostgreSQL, Recharts

- Built a self-hosted, privacy-first web analytics platform: a ~1 KB embeddable tracker, an ingestion API with bot filtering and Zod validation, and live dashboards for visitors, pages, referrers, countries and devices.
- Designed cookieless unique-visitor counting with a daily-rotating salted hash, storing no cookies or IP addresses, so sites using it need no consent banner.
- Moved analytics aggregation into PostgreSQL functions (time series, breakdowns, live visitors) protected by row-level security, with public read-only share links.

Scan2Help | Next.js, TypeScript, Prisma, PostgreSQL

- Built an emergency-contact QR sticker platform: anyone who scans a sticker gets a bilingual (English/Urdu) page with the owner's emergency contacts and a one-tap Call Now button, with no app or signup.
- Implemented passwordless magic-link login with single-use, 15-minute, SHA-256-hashed tokens and httpOnly JWT sessions; activating a QR requires both a session and ownership.
- Protected phone numbers from bulk scraping by revealing them only on tap through a tracked API call, with per-IP cooldowns and rate limiting on sensitive routes.
- Built the order flow for local payments (JazzCash/EasyPaisa, confirmed over WhatsApp): approving an order atomically mints the buyer's QR codes, and admins batch-generate print-ready sticker PDFs.

Lecture2Note | React, Tailwind CSS, Python, FastAPI

- Built an AI study platform that turns lecture audio and video into structured notes, concise summaries and interactive quizzes.
- Engineered the multi-stage processing pipeline (transcription → notes → summary → quiz) with upload handling and processing states, plus a review UI for studying notes and taking the generated quizzes.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks/Libraries: Next.js, React, Flask, FastAPI, Node.js, Vite, Tailwind CSS, shadcn/ui, Prisma

Databases: PostgreSQL (functions, row-level security), Supabase, MongoDB, Redis

Backend & Deployment: REST APIs, authentication (JWT, magic links), rate limiting, Vercel, Linux (nginx, systemd, Gunicorn)

Developer Tools: Git, GitHub, VS Code, Figma, Postman, Odoo
